

EVERYONE IN MARKETING RIGHT NOW IS ASKING THE SAME QUESTION:

**HOW DO WE
RANK IN AI?**

That's the wrong question.

AI doesn't buy.

People do.

You're optimizing for the wrong moment.

COLD DISCOVERY

Best B2B SaaS

HUMAN VALIDATION

Is [Brand] right for mid-size?

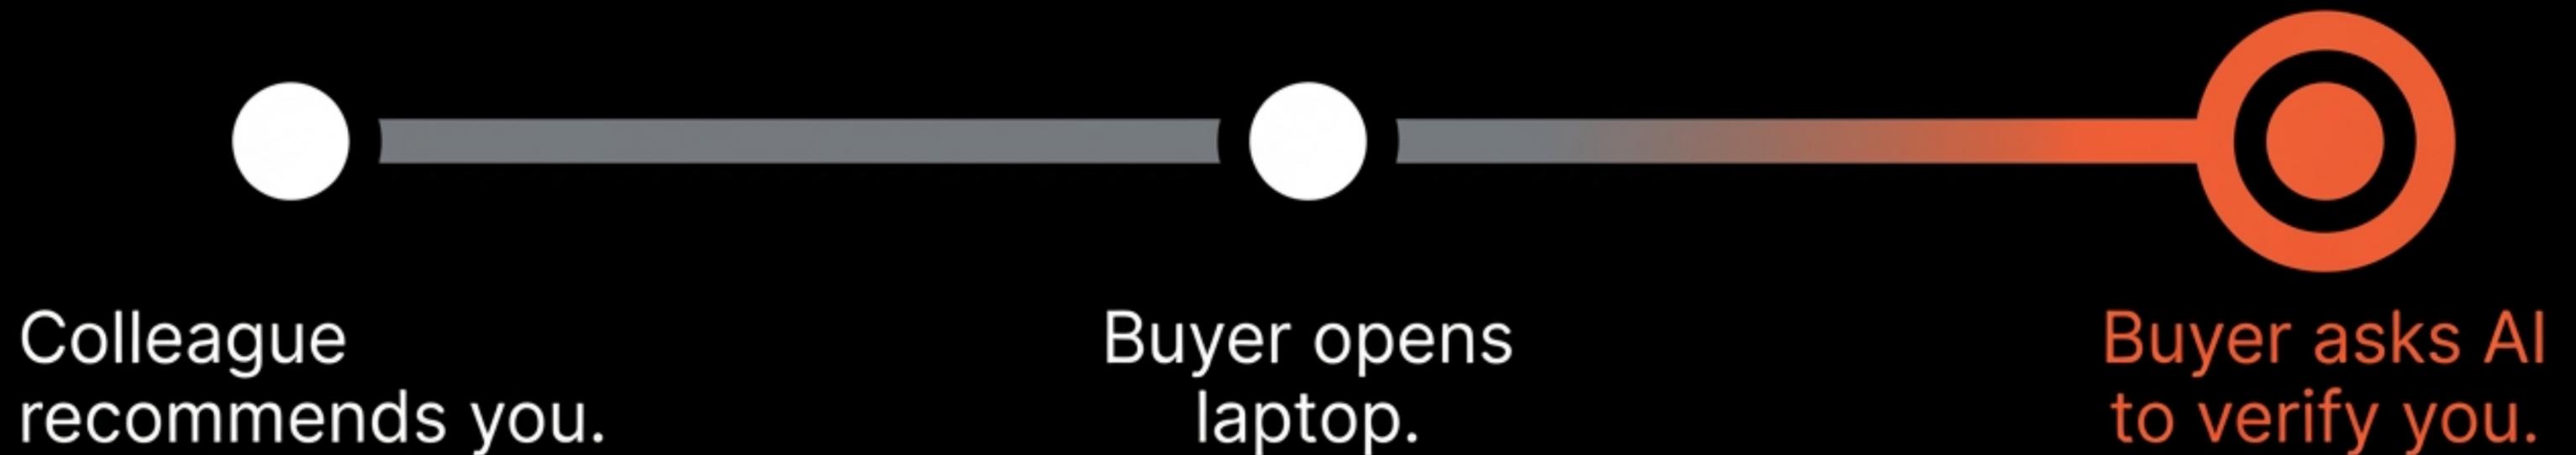

Purchases aren't decided during discovery. They are decided during validation.

70%

**...of B2B purchases
start with a network
recommendation.**

The decision happens during the verification moment.

My colleague recommended [Brand].
We're a mid-size SaaS company looking to
expand into enterprise. Is this the right fit
for us?

**The prompt that
actually converts.**

When they type that prompt, AI does one of two things:

The AI Answer

CONFIRMATION

- Mirrors colleague's positioning.
- Matches use cases.
- Builds trust.

FRICTION

- Surfaces generic category fluff.
- Contradicts narrative.
- Creates doubt.

**Stop optimizing for
~~discovery.~~**

**Start optimizing for the
verification moment.**

SPECIFIC > FREQUENT

Generic volume gives AI more material to construct a generic description.

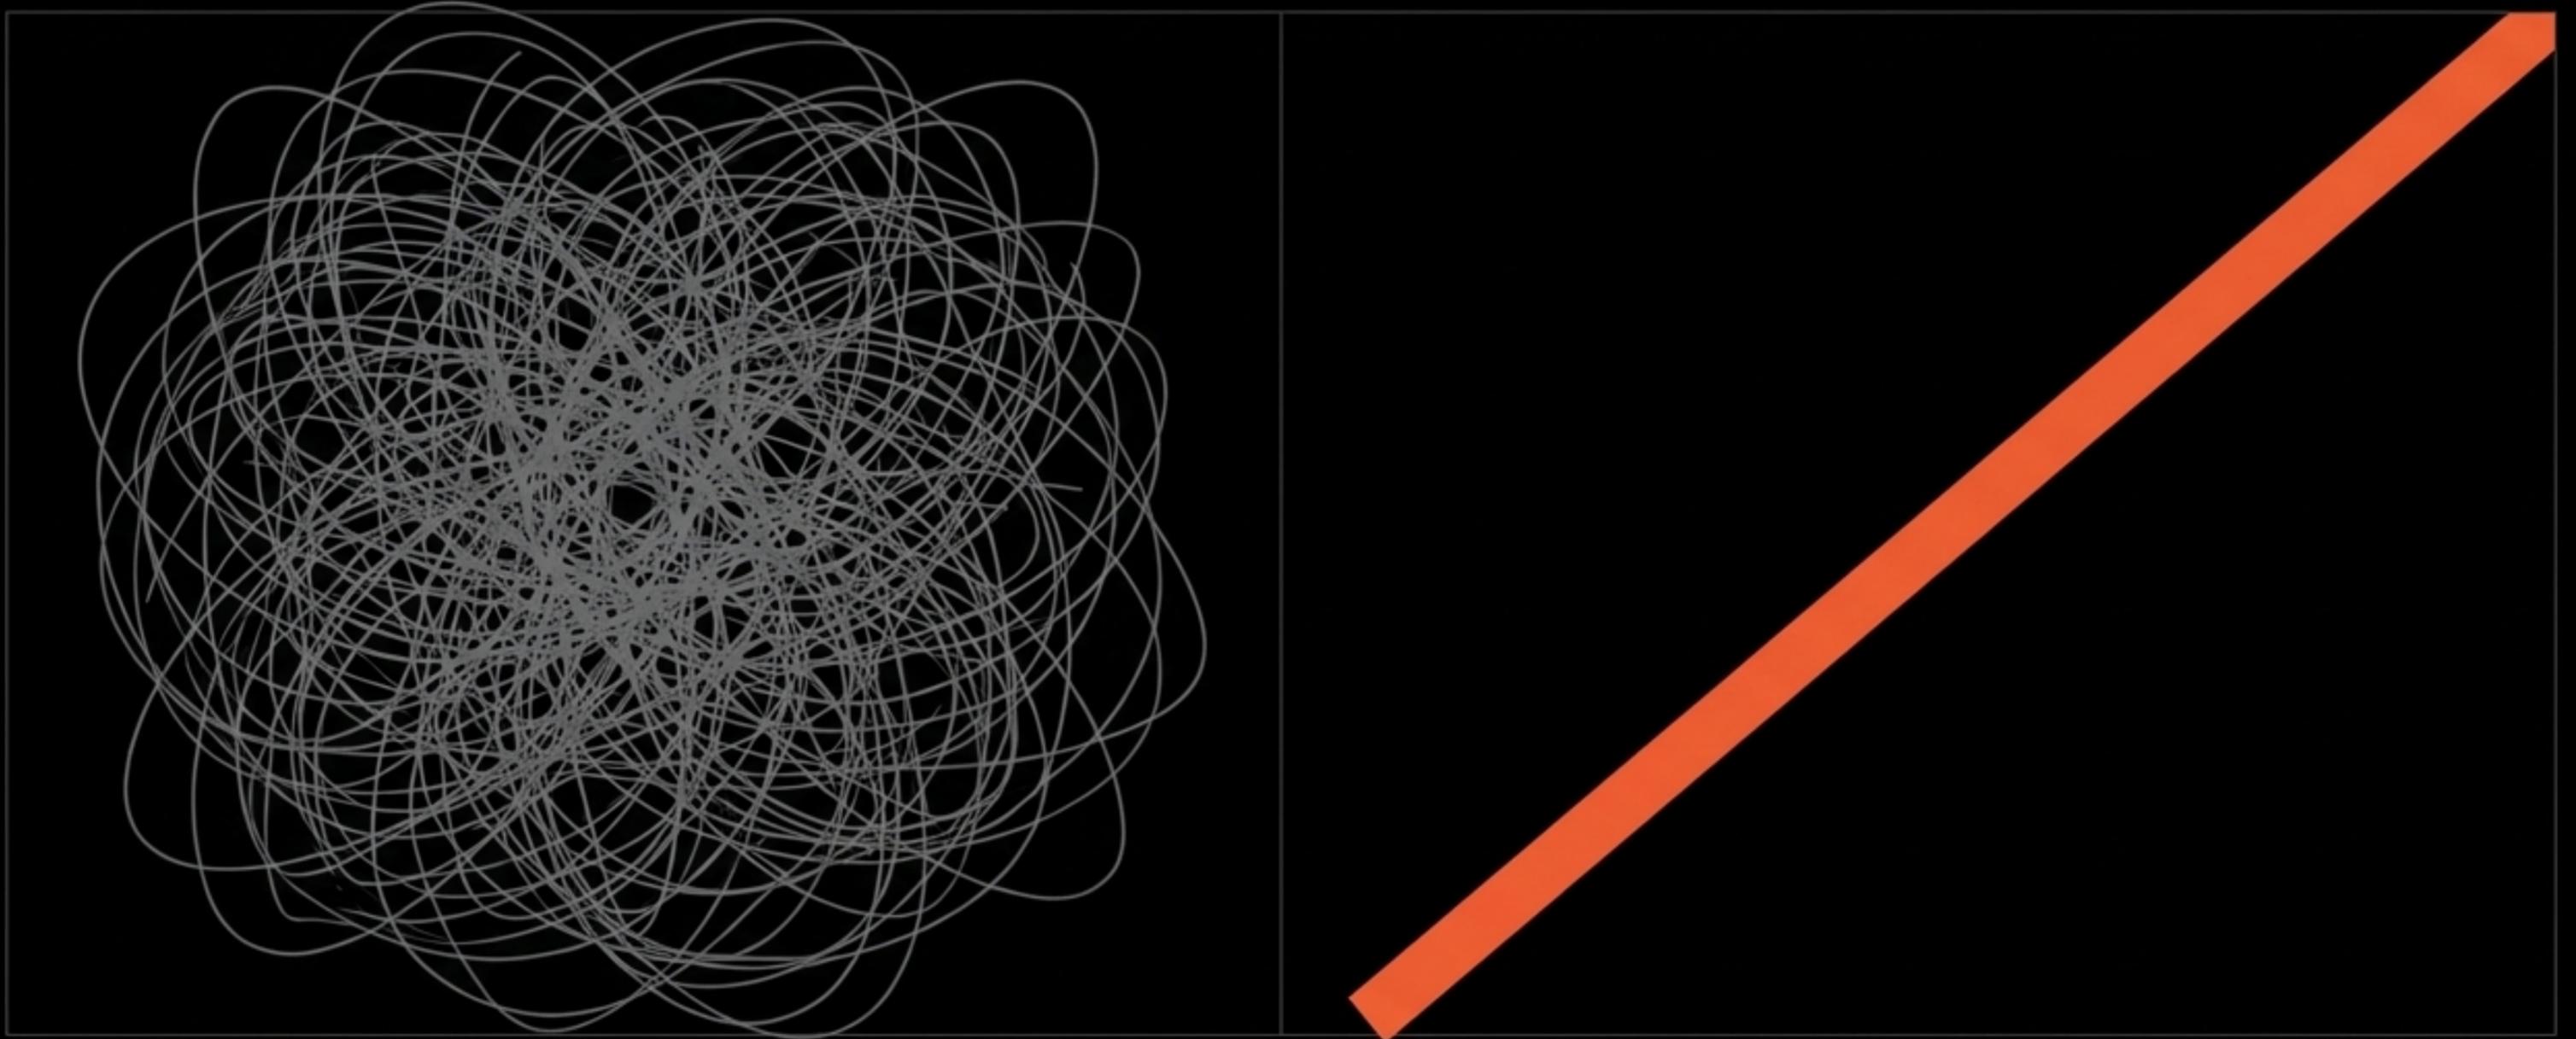

INSTEAD OF:

- Chasing viral hooks
- Trend surfing
- Generic industry topics

CREATE:

- Honest capability comparisons
- Process & methodology docs
- Exact, named use-cases

Clarity compounds. Volume confuses.

AI mirrors your LinkedIn content with 0.60 semantic similarity.
Your framing becomes its framing. Ambiguity creates friction.
